REVISED TEST REPORT FOR

PwrPak7 Model: 01019717

Tested To The Following Standards:

FCC Part 15 Subpart C Section(s)

15.247 (DTS 2400-2483.5 MHz)

Report No.: 100690-2A

Date of issue: December 12, 2017

This test report bears the accreditation symbol indicating that the testing performed herein meets the test and reporting requirements of ISO/IEC 17025 under the applicable scope of EMC testing for CKC Laboratories, Inc.

We strive to create long-term, trust based relationships by providing sound, adaptive, customer first testing services. We embrace each of our customers' unique EMC challenges, not as an interruption to set processes, but rather as the reason we are in business.

This report contains a total of 32 pages and may be reproduced in full only. Partial reproduction may only be done with the written consent of CKC Laboratories, Inc.

ADMINISTRATIVE INFORMATION

Test Report Information

REPORT PREPARED FOR: REPORT PREPARED BY:

Novatel Terri Rayle

1120 68th Ave NE CKC Laboratories, Inc.
Calgary AB T2E 8S5 5046 Sierra Pines Drive
Mariposa, CA 95338

REPRESENTATIVE: Jim Turner Project Number: 100690

Customer Reference Number: RPO0006000

DATE OF EQUIPMENT RECEIPT:November 17, 2017 **DATE(S) OF TESTING:**November 17, 2017

Revision History

Original: Testing of the PwrPak7, Model: 01019717 to FCC Part 15 Subpart C Section(s) 15.247.

Revision A: Added modulation type power settings for 6M and MCS7 and corrected a typo for the High Channel referenced from 2472 to 2462 to the updated Summary table for section 15.247(b)(3) Output Power, with notes added underneath the table. Replaced the max power datasheet. A note was added under the Band Edge Summary table for section 15.247(d) Conducted Spurious.

Report Authorization

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

Stave of Below

Test Facility Information

Our laboratories are configured to effectively test a wide variety of product types. CKC utilizes first class test equipment, anechoic chambers, data acquisition and information services to create accurate, repeatable and affordable test results.

TEST LOCATION(S): CKC Laboratories, Inc. 22116 23rd Drive S.E., Suite A Canyon Park, Bothell, WA 98021

SUMMARY OF RESULTS

Standard / Specification: FCC Part 15 Subpart C - 15.247 (DTS)

| Test Procedure | Description | Modifications | Results |
|----------------|------------------------------------|---------------|---------|
| 15.247(a)(2) | 6dB Bandwidth | NA | NP |
| 15.247(b)(3) | Output Power | NA | Pass |
| 15.247(e) | Power Spectral Density | NA | NP |
| 15.247(d) | RF Conducted Emissions & Band Edge | NA | Pass |
| 15.247(d) | Radiated Emissions & Band Edge | NA | Pass |

NA = Not Applicable

NP = CKC Laboratories was not contracted to perform test.

Modifications During Testing

This list is a summary of the modifications made to the equipment during testing.

| Summary of Conditions | |
|------------------------------|--|
| | |

No modifications were made during testing.

Modifications listed above must be incorporated into all production units.

Conditions During Testing

This list is a summary of the conditions noted to the equipment during testing.

| Summary of Conditions | |
|-----------------------|--|
| None | |
| | |

Page 5 of 32 Report No.: 100690-2A

EQUIPMENT UNDER TEST (EUT)

During testing, numerous configurations may have been utilized. The configurations listed below support compliance to the standard(s) listed in the Summary of Results section.

Configuration 1

Equipment Tested:

| Device | Manufacturer | Model # | S/N |
|---------|--------------|----------|---------------|
| PwrPak7 | Novatel | 01019717 | NMNE17190014K |

Support Equipment:

| Support Equipment | | | |
|-------------------|--------------|----------------|--------------|
| Device | Manufacturer | Model # | S/N |
| Laptop | Dell | Latitude E6530 | NA |
| AC Adaptor | Dell | LA90PM130 | NA |
| USB to Serial | SIIG | AKU3144X0129 | 5U-HS2012-S2 |

Configuration 2

Equipment Tested:

| Device | Manufacturer | Model # | S/N |
|---------|--------------|----------|---------------|
| PwrPak7 | Novatel | 01019717 | NMNE17190018S |

Support Equipment:

| Support Equipment. | | | |
|---------------------|---------------|--------------------|--------------|
| Device | Manufacturer | Model # | S/N |
| USB to Serial | SIIG | AKU3144X0129 | 5U-HS2012-S2 |
| AC Adaptor | Dell | LA90PM130 | NA |
| Laptop | Dell | Latitude E6530 | NA |
| Attenuator | Alan | Model 50TX82.5 BNC | NA |
| Amplifier | Mini-Circuits | ZHL-1217HLN-SMA | NA |
| Bias Tee Coupler | Mini-Circuits | ZFBT-4R2G-FT | NA |
| GNSS Active Antenna | Novatel | GPS-703-GGG | NA |

General Product Information:

| Product Information | Manufacturer-Provided Details |
|------------------------------------|--|
| Equipment Type: | Stand-Alone Equipment |
| Type of Wideband System: | 802.11 b/g/n20 |
| Operating Frequency Range: | 2412-2462MHz |
| Modulation Type(s): | CCK, DQPSK, PBCC, BPSK, QPSK OFDM, 16-QAM, 64-QAM |
| Maximum Duty Cycle: | Tested 100% |
| Number of TX Chains: | 1 |
| Antenna Type(s) and Gain: | Integral Trace, 2.6dBi |
| Beamforming Type: | NA |
| Antenna Connection Type: | Integral (External connector provided to facilitate testing) |
| Nominal Input Voltage: | 13.2VDC (9V-36VDC range) |
| Firmware / Software used for Test: | OM7CR0301SN0007 / WifiConfigSequencer.exe |

Page 6 of 32 Report No.: 100690-2A

FCC Part 15 Subpart C

15.247(b)(3) Output Power

| Test Data Summary - Voltage Variations | | | | | | |
|--|---|-------------------------------|-------------------------------|-------------------------------|--|--|
| Frequency (MHz) | Modulation | V _{Minimum} (dBm) | V _{Nominal} (dBm) | V _{Maximum} (dBm) | Max Deviation from V _{Nominal} (dB) | |
| 2412 | 11M Data Rate (PBCC/QPSK) (Worst Case) | 9.4 | 9.4 | 9.4 | 0.0 | |
| 2442 | 11M Data Rate (PBCC/QPSK) (Worst Case) | 9.6 | 9.6 | 9.6 | 0.0 | |
| 2462 | 11M Data Rate (PBCC/QPSK) (Worst Case) | 10.0 | 10.0 | 10.0 | 0.0 | |

Test performed using operational mode with the highest output power, representing worst case.

Parameter Definitions:

Measurements performed at input voltage according to manufacturer specification.

| Parameter | Value |
|------------------------|---------|
| V _{Nominal} : | 13.2VDC |
| V _{Minimum} : | 9VDC |
| V _{Maximum} : | 36VDC |

Page 7 of 32 Report No.: 100690-2A

| | Power Output Test Da | ta Summary - RF Con | ducted Mea | surement | |
|--------------------|---|-------------------------|-------------------|----------------|---------|
| Measuremen | t Option: AVGSA-1 | | | | |
| Frequency (MHz) | Modulation | Ant. Type / Gain (dBi) | Measured (dBm) | Limit (dBm) | Results |
| 2412 | 11M Data Rate (PBCC/QPSK) (Worst Case) | Integral Trace / 2.6dBi | 9.4 | ≤30 | Pass |
| 2442 | 11M Data Rate (PBCC/QPSK) (Worst Case) | Integral Trace / 2.6dBi | 9.6 | ≤30 | Pass |
| 2462 | 11M Data Rate (PBCC/QPSK) (Worst Case) | Integral Trace / 2.6dBi | 10.0 | ≤30 | Pass |
| 2412 | 6M (OFDM/BPSK) (Worst Case 802.11g) | Integral Trace / 2.6dBi | 8.6 | ≤30 | Pass |
| 2442 | 6M (OFDM/BPSK) (Worst Case 802.11g) | Integral Trace / 2.6dBi | 9.4 | ≤30 | Pass |
| 2462 | 6M (OFDM/BPSK) (Worst Case 802.11g) | Integral Trace / 2.6dBi | 10.0 | ≤30 | Pass |
| 2412 | MCS7 (64-QAM) (Worst Case 802.11n) | Integral Trace / 2.6dBi | 7.8 | ≤30 | Pass |
| 2442 | MCS7 (64-QAM) (Worst Case 802.11n) | Integral Trace / 2.6dBi | 8.6 | ≤30 | Pass |
| 2462 | MCS7 (64-QAM) (Worst Case 802.11n) | Integral Trace / 2.6dBi | 9.3 | ≤30 | Pass |

Note:

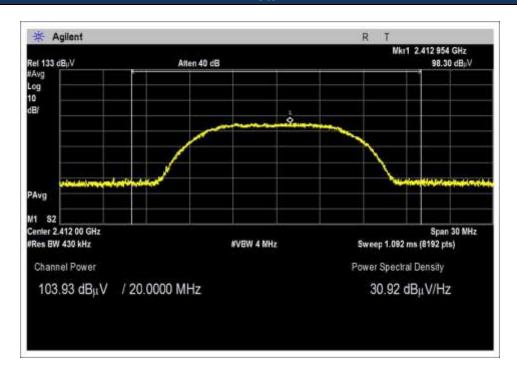

Measured dBm = Measured dBuV - 107

Measured dBuV = Raw dBuV (spectrum analyzer reading) + insertion loss factors (for cable and attenuator) See data sheet for insertion loss factors.

Configuration 1

Test Conditions / Notes:

Frequency Range: Fundamental

Frequency tested: 2412, 2442, 2462MHz

Firmware power setting: Max

EUT Firmware: OM7CR0301SN0007

Modulation/Data Rate: All data rates investigated, 11M data rate worst case.

Antenna type: Integral Trace Antenna Gain : 2.6dBi

Duty Cycle: 100%

Setup:

The EUT is DC powered through a DC power supply. The EUT is connected to a support laptop via USB directly, as well as a RS-232 cable which connected to a serial hub to the laptop.

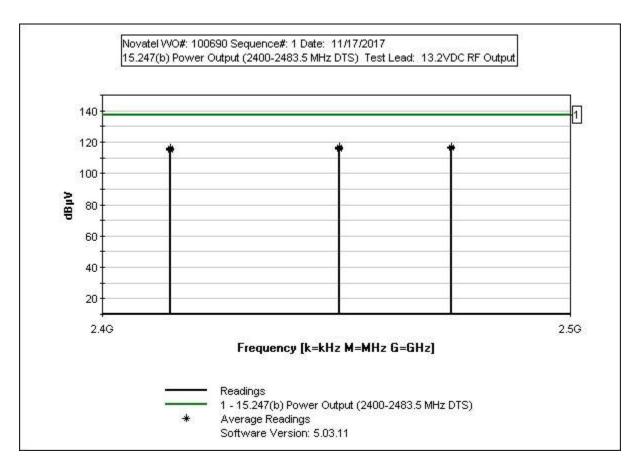

The EUT is continuously transmitting. Low, Mid, and High channels as well as all data rates investigated, worst case data reported. The EUT was fitted with a temporary antenna port for direct conducted measurements.

Temperature (°C): 22 Relative Humidity (%): 33 Test Location: Bothell Lab Bench

Test Method: ANSI C63.10 (2013), KDB 558074 (April 5, 2017)

Test Setup / Conditions / Data

Test Location: CKC Laboratories • 22116 23rd Drive SE, Suite A • Bothell, WA 98021 • 1-800-500-4EMC (4362)

Customer: Novatel

Specification: 15.247(d) / 15.209 Radiated Spurious Emissions

Work Order #: 100690 Date: 11/17/2017
Test Type: Maximized Emissions Time: 14:28:37
Tested By: Steven Pittsford Sequence#: 5

Software: EMITest 5.03.11

Equipment Tested:

Device Manufacturer Model # S/N
Configuration 2

Support Equipment:

Device Manufacturer Model # S/N
Configuration 2

Test Conditions / Notes:

Frequency Range: 1-13GHz

Frequency tested: 2412, 2442, 2462MHz

Firmware power setting: 10

EUT Firmware: OM7CR0301SN0007

Modulation/Data Rate: All data rates investigated, only worst case data reported

Antenna type: Integral Trace Antenna Gain: 2.6dBi

Duty Cycle: 100%

Setup:

The EUT is DC powered through a battery. The EUT is connected to an external GNSS active antenna which is located remotely with an open view of the sky. The active antenna is powered by a Bias Tee coupler and the signal strength is tuned with an amplifier and output DC power supply. The Bias Tee coupler is powered by a dual output power supply. The EUT is connected to a support laptop via 1 USB port. The 26Pin IO contained 1 x CAN Interface and 3 x RS-232 ports. The RS-232 ports which were connected to a serial to USB 2 port hub which is then connected to the laptop.

EUT is continuously transmitting. Low, Mid, and High channels as well as all data rates investigated, worst case data reported. Horizontal and Vertical antenna polarities investigated, only worst case reported. The EUT is fully exercised with communication and data transfer between the EUT and support laptop. Below 1GHz, the EUT is on the test table 80cm high. Above 1GHz, The EUT is on the test table 150cm high connected to the internal trace antenna.

Test Setup / Conditions / Data

Test Location: CKC Laboratories • 22116 23rd Drive SE, Suite A • Bothell, WA 98021 • 1-800-500-4EMC (4362)

Customer: Novatel

Specification: 15.247(d) / 15.209 Radiated Spurious Emissions AVE

Work Order #: 100690 Date: 11/17/2017
Test Type: Maximized Emissions Time: 15:13:19
Tested By: Steven Pittsford Sequence#: 6

Software: EMITest 5.03.11

Equipment Tested:

| Device Manufacturer | | Model # | S/N | |
|---------------------|--|---------|-----|--|
| Configuration 1 | | | | |

Support Equipment:

| Device | Manufacturer | Model # | S/N | |
|-----------------|--------------|---------|-----|--|
| Configuration 1 | | | | |

Test Conditions / Notes:

Frequency Range: 2.38-2.7GHz Frequency tested: 2412, 2462MHz Firmware power setting: 10

EUT Firmware: OM7CR0301SN0007

Modulation/Data Rate: All data rates investigated, only worst case data reported

Antenna type: Integral Trace Antenna Gain: 2.6dBi

Duty Cycle: 100%

Setup:

The EUT is DC powered through a battery. The EUT is connected to an external GNSS active antenna which is located remotely with an open view of the sky. The active antenna is powered by a Bias Tee coupler and the signal strength is tuned with an amplifier and output DC power supply. The Bias Tee coupler is powered by a dual output power supply. The EUT is connected to a support laptop via 1 USB port. The 26Pin IO contained 1 x CAN Interface and 3 x RS-232 ports. The RS-232 ports which were connected to a serial to USB 2 port hub which is then connected to the laptop.

EUT is continuously transmitting. Low, Mid, and High channels as well as all data rates investigated, worst case data reported. Horizontal and Vertical antenna polarities investigated, only worst case reported. The EUT is fully exercised with communication and data transfer between the EUT and support laptop. Below 1GHz, the EUT is on the test table 80cm high. Above 1GHz, The EUT is on the test table 150cm high connected to the internal trace antenna.

SUPPLEMENTAL INFORMATION

Measurement Uncertainty

| Uncertainty Value | Parameter | |
|-------------------|---------------------------|--|
| 4.73 dB | Radiated Emissions | |
| 3.34 dB | Mains Conducted Emissions | |
| 3.30 dB | Disturbance Power | |

Uncertainties reported are worst case for all CKC Laboratories' sites and represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2. Compliance is deemed to occur provided measurements are below the specified limits.

Emissions Test Details

TESTING PARAMETERS

Unless otherwise indicated, the following configuration parameters are used for equipment setup: The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. Cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the setup photographs. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables.

The emissions data was taken with a spectrum analyzer or receiver. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in the table below. The corrected data was then compared to the applicable emission limits. Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in $dB\mu V/m$, the spectrum analyzer reading in $dB\mu V$ was corrected by using the following formula. This reading was then compared to the applicable specification limit. Individual measurements were compared with the displayed limit value in the margin column. The margin was calculated based on subtracting the limit value from the corrected measurement value; a positive margin represents a measurement exceeding the limit, while a negative margin represents a measurement less than the limit.

| SAMPLE CALCULATIONS | | | | | | |
|---------------------|----------------------|----------|--|--|--|--|
| | Meter reading (dBμV) | | | | | |
| + | Antenna Factor | (dB/m) | | | | |
| + | Cable Loss | (dB) | | | | |
| - | Distance Correction | (dB) | | | | |
| - | Preamplifier Gain | (dB) | | | | |
| = | Corrected Reading | (dBμV/m) | | | | |

Page 31 of 32 Report No.: 100690-2A

TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed were used to collect the emissions data. A spectrum analyzer or receiver was used for all measurements. Unless otherwise specified, the following table shows the measuring equipment bandwidth settings that were used in designated frequency bands. For testing emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used.

| MEASURING EQUIPMENT BANDWIDTH SETTINGS PER FREQUENCY RANGE | | | | | | |
|--|---------------------|------------------|-------------------|--|--|--|
| TEST | BEGINNING FREQUENCY | ENDING FREQUENCY | BANDWIDTH SETTING | | | |
| CONDUCTED EMISSIONS | 150 kHz | 30 MHz | 9 kHz | | | |
| RADIATED EMISSIONS | 9 kHz | 150 kHz | 200 Hz | | | |
| RADIATED EMISSIONS | 150 kHz | 30 MHz | 9 kHz | | | |
| RADIATED EMISSIONS | 30 MHz | 1000 MHz | 120 kHz | | | |
| RADIATED EMISSIONS | 1000 MHz | >1 GHz | 1 MHz | | | |

SPECTRUM ANALYZER/RECEIVER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the emissions tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "positive peak" detector mode. Whenever a "quasi-peak" or "average" reading was recorded, the measurement was annotated with a "QP" or an "Ave" on the appropriate rows of the data sheets. In cases where quasi-peak or average limits were employed and data exists for multiple measurement types for the same frequency then the peak measurement was retained in the report for reference, however the numbering for the affected row was removed and an arrow or caret ("^") was placed in the far left-hand column indicating that the row above takes precedence for comparison to the limit. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

Peak

In this mode, the spectrum analyzer or receiver recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature called "peak hold," the measurement device had the ability to measure intermittent or low duty cycle transient emission peak levels. In this mode the measuring device made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

Quasi-Peak

Quasi-peak measurements were taken using the quasi-peak detector when the true peak values exceeded or were within 2 dB of a quasi-peak specification limit. Additional QP measurements may have been taken at the discretion of the operator.

Average

Average measurements were taken using the average detector when the true peak values exceeded or were within 2 dB of an average specification limit. Additional average measurements may have been taken at the discretion of the operator. If the specification or test procedure requires trace averaging, then the averaging was performed using 100 samples or as required by the specification. All other average measurements are performed using video bandwidth averaging. To make these measurements, the test engineer reduces the video bandwidth on the measuring device until the modulation of the signal is filtered out. At this point, the measuring device is set into the linear mode and the scan time is reduced.
